The Forest Management Unit Észak-Kiskunság manages the hunting grounds in Kerekegyháza and the Nyíri forest, on a territory of 9 000 hectares, which is woodland in more than 60 %. The central part of the hunting ground Nyíri forest is a deer-forest of 1200 hectares (remaining stands of oak plantations), where hunting is a remarkable experience, just like on free land with almost sure shooting possibility.

Game in season: roe deer, wild boar, fallow deer. Roe deer represents an average quality in the region, trophies may have a weight of over 450 grammes. The quantity and quality of wild boar population are outstanding, eventually with tusk lengths of 23 centimetres. The most significant wild species are fallow deers, with some trophies over 5 kilogrammes.

The hunting ground of the Forestry Management Unit in Bugac is 10,010 ha, two-thirds of which is covered by forest. Juniper-poplar forests are typical for this area.

There is mainly big game. Game in season: fallow deer, red deer, roe deer, wild boar. The population of fallow deer is not big, however fallow bucks with trophies of 8-9 kg have been shot. The quality of the red deer population has been increasing, trophies of 3-4 kg are characteristic. Roe deer live in forest habitats, trophies of the best bucks may reach 400g. The population of wild boar has increased recently.

11.55 kg, 217.63 CIC points

The hunting ground in Kelebia is 11,450 ha, it is covered by forest in appr. 60%. Game in season: red deer, fallow deer, roe deer, wild boar.

The essence of hunting is the fallow deer population, of the best quality. During the troating of fallow bucks in October great old bucks can be shot, more than 70% of the trophies are appreciated with a medal. In 2014 22 of 28 received medals: 17 golden, 4 silver and 1 bronze. The average weight of trophies with medals reached 4.56 kg. 6 trophies with golden medals received more than 200 CIC points.

A significant game of the hunting ground is the red deer with good trophy quality; the average trophy weight is 6-8 kg, however it can reach 10 kg as well. The roe deer population is also significant, it has a medium trophy quality (300-350 gr).

5,10 kg – 212.43 CIC points

The hunting ground of the Forestry Management Unit in Császártőltes is 11,634 ha. Due to the habitat characteristics it is a typical big game hunting ground. Game in season: red deer, roe deer, wild boar. This hunting ground is famous for its excellent red deer population with trophies of 7-10 kg or sometimes even 11 kg. The wild boar population is stable due to the appropriate habitat and the continuous feeding. The roe deer population is of medium quality with an average trophy size of 200-350g.
